The Internet

- Network of networks – world-wide in extent/coverage
- Each connected network is called an autonomous system (AS)
An AS can be your home, company, a corporate network, an Internet Service Provider (ISP), or the Internet backbone
- Three main attributes (per Federal Networking Council)
 - Has globally unique address space based on the IP protocol
 - Supports Transmission Control Protocol/Internet Protocol (TCP/IP) suite and all compatible protocols
 - Provides & uses high-level services layered on the communications infrastructure (links applications to the network)
