#### Message from the Desk of the Chairman

It is my great pleasure to extend heartfelt greetings & congratulations to the efforts of our entire editorial board of SPARKS on the occasion of 13<sup>th</sup> issue of our college newsletter.

At this outset, I would like to discuss the key to 'SUCCESS'. To many thinks, success seems to come suddenly. When you observe others and what they have achieved you usually don't appreciate what it has taken for them to get where they are. Ultimately, in failing to do this you also fail to learn what it would take for you to attain the same level of achievement and success.

But, if you take the time to truly think about it, you will find that success is usually only a small step away. Yet despite that it eludes most people. It is always so near and yet so far.

When we take a closer look at the great thinkers throughout history, a willingness to take on failure isn't a new or extraordinary thought at all. From the likes of Thomas Edison, Augustine, Darwin and Freud to the business mavericks and sports legends of today, failure is as powerful a tool as any in reaching great success. Always remember "Failures are the stepping stones to success".

I wish each one of you to be not only efficient but also effective.

Dr. M. Santhiramudu, Chairman

#### Message from the Desk of the Principal

I am delighted to state that the editorial board of SREC is bringing out the 13<sup>th</sup> issue of our College Newsletter "SPARKS".

At this outset, as a continuation of my previous messages concerning the traits that can cause us to be critical, once I would like to recall the traits discussed earlier issues.

- Intellectual Humility
- Intellectual Courage
- Intellectual Empathy
- Intellectual Perseverance
- Intellectual Integrity

The next trait is Confidence in Reason. We need to understand that one's own higher interests and those of humankind will be best served by giving the freest play to reason. We need to come to our own conclusions by developing our rational faculties. By this we would be able to form insightful viewpoints, draw reasonable conclusions, and develop clear, accurate, relevant, and logical thought processes.

The last trait is Intellectual Autonomy, which is having rational self-authorship of one's beliefs, values, and way of thinking; not being dependent on others for the direction and control of one's thinking. We need to mindfully form principles of thought and action and do not mindlessly accept those presented to them.

This is the comprehensive list of the traits of a critical thinker. It is my strong belief that if we spend some time on these traits to allow them to soak into our mind and then make conscious efforts to cultivate these traits, we would surely become a critical thinkers, who would make a difference not only to the organizations in which we are working but also to the greater world in which we live.
